30 NOV 2020

To whom it may concern,

I am writing this letter in support of Phase2 Advantage and its training and certifications program. I have had a working relationship with Phase2 Advantage since early 2020 when I began searching for high-quality training and certification programs for university students in Australia that aligned with the NICE Cybersecurity Workforce Framework. As the Director of [Cyberarms](#) it is my responsibility to provide cybersecurity training, education, and consultancy services in Australia.

After researching and investigating the company and its programs, I found its cybersecurity courses especially practical. I was confident these programs would allow our clients to gain the skills necessary to understand cyber issues and ways to identify, diagnose, and resolve these challenges in real-world environments.

It was at this point that I determined it was prudent to invest time and energy to become a Phase2 Advantage certified Cyber Security Operations Manager. I found the training tools, materials, and learning management system for studying this course easy to navigate, logically organised, comprehensive, and highly instructive.

I believe that the Phase2 Advantage cybersecurity courses, especially those which include the Project Ares® labs that present students with real-world cyber-attacks and response scenarios, can well equip individuals with the technical capabilities required to enter the cybersecurity workforce with a high level of confidence and proficiency.

It is my hope that his brief reference will indicate some of the many fine qualities of Phase 2 Advantage and its cybersecurity training programs to your satisfaction. I consider the Director of Operations for Phase2 Advantage, Michael I. Kaplan, as a friend as well as a professional colleague. He is an experienced cybersecurity professional and leader within the industry.

It is without reservation that I state I support Phase2 Advantage, Michael I. Kaplan, and its mission in providing quality training and services in cybersecurity worldwide to students in the technology workforce from entry-level to advanced positions.

Please feel free to contact me if you have any questions regarding Phase2 Advantage of its Director of Operations, Michael I. Kaplan.

Yours Faithfully,

Wade S. Irvin
IT Operations Manager of [E-Pay Australia](#)
Director, [Cyberarms](#)
