To Whom It May Concern:

The Cybersecurity Workforce Education Center at Savannah Technical College has partnered with Phase2 Advantage to bring innovative, contemporary, industry focused cybersecurity training programs to support our academic delivery. This support augments our academic programs allowing for a diverse and high quality addition of industry certifications that our students can receive to enhance their differentiation and preparation in the cybersecurity workforce.

Phase2 Advantage training materials are high quality content developed in alignment with the expectations and requirements of national standards in cybersecurity workforce skills. The materials while innovative and attractive are also focused on skills development and meeting the needs of the student to be successful in doing the work that is needed in cyber positions from day one of hiring.

Phase2 Advantage delivers proprietary course material and organizational workforce specific upon request content that meets and seeks to exceed the needs of today. Phase2 Advantage cybersecurity courses have an impressive level of foresight as well in looking to prepare students for skill sets and requirements that are going to be needed in the future but are not currently being provided by others in the training space such as with the innovative Certified Network Forensics Analysis Manager course (C)NFAM).

We are excited to work with Phase2 Advantage and look forward to a long partnership in training the cybersecurity workforce for years to come.

Sincerely,

A handwritten signature in black ink, appearing to read 'Scheidt'.
